

MISSION STATEMENT

The purpose of the McLean County Health Department is to fulfill the public interest in assuring conditions conducive to good health and providing leadership in promoting and protecting the health of county residents. The Department shall carry out its mission through:

- 1) assessment and analysis of health conditions;
- 2) development of local health policies;
- 3) prevention and control of disease through health promotion, early intervention and health protection;
- 4) where applicable, enforcement of state laws and local ordinances pertaining to health;
- 5) assurance of access to personal health care services;
- 6) minimizing the adverse impact of diseases and disabilities;
- 7) conducting programs in accordance with Illinois Department of Public Health certification standards for local health departments; and,
- 8) coordination and planning with other entities for a comprehensive community health system.

MESSAGE FROM THE DIRECTOR

One way in which public health's importance to the community can be fairly characterized is to reiterate a common adage used by professionals in the field: "when public health does its job, nothing happens." That's not to say that those vested with the responsibility of assuring the vitality of the public health system aren't constantly working to protect the public. Nor does that quote imply that public health professionals should work quietly in the background, only to be called upon during times of crisis. Instead, what I'm stating here is that our mission is clear: to protect the public's health through assuring conditions conducive to good health. Absence of disease in humans, elimination of harmful pathogens in food and water, and diminishing threats brought on by acts of terror are examples of how achieving that intangible *nothing* is an accomplishment that necessitates substantial effort on the part of many within the public health system.

It is important to understand that the public health system does not consist solely of public health departments. Instead, the system is comprised of hospitals, physicians, schools, human service agencies, and most recently emergency first responders as part of the nation's homeland security infrastructure. Over the past several years, that system of collaborating community agencies has undergone transition, which became markedly visible in 2003. New threats posed by multi-drug resistant tuberculosis, bioterrorism, and emerging pathogens challenged the public health system to assume a more active leadership role in protecting the community's health.

Today, local health departments are a driving force in assuring the public's health. Local health departments are community entities, governed and staffed at the local level, that provide services, regulation, and steer the entire public health system. This is how the McLean County Health Department works quietly to assure good public health and provide community security. This is what we mean by *The New Face of Public Health*.

Many in the community lack a complete understanding of the McLean County Health Department's role in helping shape the public health system. The pages that follow will help shed light on this critical responsibility. The department continues to expand its role in assuring vital health protection services for the community and forge partnerships with local agencies to prepare McLean County for whatever public health threats loom ahead.

With new-pride and a sense of rededication to the principles of public health, we present the McLean County Health Department 57th Annual Report and unveil *The New Face of Public Health*. In concert with our many *partners in prevention*, we move forward to bolster the public health system in McLean County.

Robert J. Keller Director

MESSAGE FROM THE BOARD OF HEALTH PRESIDENT

In 2003, I assumed the office of President of the McLean County Board of Health, which allowed me to survey the efforts of McLean County's public health system from a new perspective. The view provided me a closer look at the expertise, commitment, and collaboration of community partners working together to protect the health of McLean County residents. The role of public health in the community and the system we have in place today is quite different from the one we had when I first assumed membership on the Board.

During the past year, our readiness to perform in times of uncertainty and threatened security was strengthened. Valuable bonds between community agencies and non-traditional partners were also tightened to ensure a network of cooperative, capable professionals, all with the same goal in mind - to protect and promote the public's health. This is the true embodiment of *The New Face of Public Health*.

With continued dedication and a quest for continuous improvement, the McLean County Health Department will maintain its presence at the head of the community's public health infrastructure. On behalf of the McLean County Board of Health, McLean County Tuberculosis Care and Treatment Board, the McLean County Board of Care and Treatment of Persons with a Developmental Disability, I am proud to present the 57th Annual Report of the McLean County Health Department.

P.A. "Sue" Berglund President, McLean County Board of Health

ILLINOIS PROJECT FOR LOCAL ASSESSMENT OF NEED (IPLAN)

The Illinois Project for Local Assessment of Need (IPLAN), instituted in McLean County in 1993, serves as a guide to improving the health of all McLean County residents The plan involves thorough assessment of health needs and collaboration among community partners to address those needs. As identified in the 5-year Community Health Plan (CHP) for 1999-2004, the McLean County Health Department, Community Health Advisory Committee, and the CHP Implementation Task Forces have worked to improve the following three priority health problems in McLean County:

- 1. Coronary Heart Disease/Heart Disease (including Cerebrovascular Disease)
- 2. Cancer (including Lung Cancer and Breast Cancer)
- 3. Infant Mortality
 (including Low Birth Weight/Very Low Birth Weight and Congenital Anomalies)

Three task forces, comprised of community leaders in business, education, and health, were charged with implementing intervention strategies and have worked steadily over the years to improve the health status of McLean County residents. Significant progress was made in 2003 to address the three areas of concern as task force members executed the following community initiatives:

- The Coronary Heart Disease Task Force coordinated several blood pressure clinics with St. Mary's Catholic Church in Bloomington and the local Hotel/Motel Association, targeting McLean County's Hispanic population.
- Quit Smoking Kits were provided to area businesses by the Cancer Task Force to help participating employees quit smoking in observance of the American Cancer Society Great American Smokeout in November of 2003.
- In January 2003, the Sudden Infant Death Syndrome (SIDS) subcommittee of the Infant Mortality Task Force provided SIDS educational packets to the nurseries at local hospitals. The packets give parents, grandparents and caregivers information about safe sleeping practices and reducing the risk of SIDS, along with a one-piece infant t-shirt stating the simple reminder to "Please Put Me on My Back to Sleep".
- Infant Mortality Task Force members partnered with SIDS of Illinois, McDonald's, and a local radio station, WBNQ, to hold the Russell Rush Roof Sit to raise funds for SIDS awareness and education.

Members of the IPLAN SIDS Subcommittee and SIDS of Illinois representatives posed for photo during the Russell Rush Roof Sit for SIDS.

Thanks to the IPLAN Infant Mortality Task Force, parents of newborns in McLean County received SIDS educational packets and "Please put me on my back to sleep" one-piece infant t-shirts in 2003.

2003 HIGHLIGHT5

PERSONAL HEALTH SERVICES DIVISION

The New Face of Public Health is manifested in the growing diversity of the populations served by the Maternal and Child Health Section. Sixteen percent of pregnant women enrolled in the Women, Infants, and Children (WIC) and Family Case Management programs required Spanish interpretive services - a marked increase over the percentage served in 2002. Through the department's contract with Western Avenue Community Center, valuable language assistance provided by interpreters has become a mainstay of the department's service array. While the diversity of Maternal and Child Health program enrollees continued to expand in 2003, the total number of young children, pregnant women, and families within those programs grew as well. The number of WIC enrollees reached new heights with an all-time high exceeding 2,200. Additionally, McLean County continues to see the numbers of women enrolled in the KidCare health insurance program climb, resulting in increased caseloads within the Family Case Management Program.

A new name was given to the department's All Our Kids: Birth to Three Network, which is now known as the All Our Kids: Early Childhood Network. The name change resulted when the AOK Network expanded its scope of service to include children ages birth to six, an effort made possible by merging with the Parent Advisory Council. The level of collaboration among various stakeholders within the maternal and child health and early childhood sectors was recognized nationally when the McLean County community received the Communities of Excellence 2003 Award from the Integrated Services Committee of the Federal Interagency Coordinating Council (FICC) for Early Intervention and Communities Can!.

Public health is being faced with a growing list of challenges, and near the top of that list is the national battle against obesity. During 2003, the department was awarded a specialized grant to help WIC families establish healthy eating habits, engage in regular physical activity, and ultimately, avoid excessive weight gain. Forty-five percent of active WIC clients in McLean County are considered overweight. In addition to addressing the issue of obesity, Family Case Management Program staff screened clients for collateral issues such as domestic violence and postpartum depression and conducted educational efforts on folic acid, smoking cessation, and Sudden Infant Death Syndrome.

The **Communicable Disease Section** guarded against emerging infections, such as SARS and monkeypox, and modified its HIV counseling and testing outreach in 2003. Shelters for victims of domestic violence, homeless shelters, and local churches serving African-Americans were

designated outreach sites for reaching high-risk, target populations. Collaboration between communicable disease staff and the department's health promotion specialists resulted in some innovative approaches to reaching other county residents at high risk of contracting HIV and other sexually transmitted diseases. Initiation of an assertive community education campaign and coordination of a successful community forum increased awareness of the incidence of sexually transmitted diseases among adolescents in McLean County.

The Community Health Services Section continued providing critical health protection services, which centered largely on the coordination of the annual influenza vaccination campaign for high-risk adults. Over 1,500 doses of influenza vaccine were administered to McLean County residents, mostly over the age of 60. As a result, influenza and pneumonia account for a modest 3% of all deaths in McLean County. Public health nurses in the section also worked to protect the health of senior citizens enrolled in the Home Nursing Program by constantly monitoring and adhering to their medical needs. Additionally, the section served as a training ground for public health nurses of the future. The New Face of Public *Health* is represented by student nurses from Illinois State University and Illinois Wesleyan University. Aspiring nurses assisted the department's public health nursing staff in meeting the needs of elderly county residents in the home nursing program. The oral health needs of many McLean County children and adults were further met during 2003 through much needed additional dental hygiene services in the dental clinic.

ENVIRONMENTAL HEALTH DIVISION

In 2003, The New Face of Public Health could be seen in the Environmental Health Division's heightened vigilance in managing rural discharges and monitoring McLean County's on-site wastewater and small flows sewage disposal systems. During 2003 alone, the Private Sewage Disposal Program identified 32 illegal discharges, which were replaced with on-site wastewater systems that met the provisions of County and state regulations. This resulted in the removal of 1,460,000 gallons of raw sewage from the environment on an annual basis. The division processed an ever-increasing stream of applications for on-site wastewater systems for new construction. In fact, over 50% of private sewage applications submitted in 2003 pertained to new construction. A partnership was formed with the Illinois Environmental Protection Agency (IEPA) to monitor smaller subdivision surface discharging sewage treatment systems in McLean County and assure that environmental standards are maintained. The collaboration between the McLean County Health Department and IEPA also enables more stringent reviews and stipulations as new rural subdivisions are proposed.

McLean County's New Face of Public Health is further reflected in the bustling Food Sanitation Program and in the generation of many new and remodeled food establishments that appeared throughout the past year. The division vigorously pursued compliance with state and local food sanitation practices within the county's commercial establishments. The program maintained a 95% compliance rate with the number of food establishments meeting the Illinois Department of Public Health certified food manager requirement. The division also initiated an effort to upgrade food storage facilities in the county, resulting in 38 inadequate food storage units being made to comply with code requirements. During 2003, the division continued its collaborative venture with the Bloomington-Normal Water Reclamation District, the City of Bloomington, and the Town of Normal to improve compliance with grease trap disposal regulations.

The Environmental Health Division filled a vital role in providing West Nile virus surveillance throughout McLean County, which resulted in greater public awareness, preparedness and protection in 2003.

THE ENVIRONMENTAL HEALTH DIVISION PROVIDED THE FOLLOWING SERVICES DURING 2003:

Food Sanitation Program

Geothermal Exchange System Program Installation registrations
West Nile Virus Surveillance Program Number of suspect birds submitted for lab analysis

MENTAL HEALTH DIVISION

In 2003, the community mental health, substance abuse, and developmental disabilities service system was constrained by significant fiscal limitations due to evertightening state fiscal limitations, yet the need for such services was unremitting. The Marc Center and McLean County Center for Human Services enhanced their community-based service capacities to meet the needs of McLean County residents transferred from state operated facilities. Notably, the McLean County Center for Human Services completed the year without any planned admissions of children to state operated facilities by providing care to mentally ill and emotionally disturbed youth. The Marc Center worked with legislators and families of past residents of the former Lincoln Development Center promoting the value of community-based residential care.

Assuring a healthy, productive and safe community environment for children and adolescents is a primary goal of the McLean County Health Department. To further this goal, the department worked with community providers to meet community substance abuse prevention and early intervention needs for McLean County's youth.

The New Face of Public Health is apparent in the partnerships and community resources directed at meeting local mental health needs. Protecting vulnerable populations through the provision of community-based services and residential options is a measure of our collective strength.

ADMINISTRATION AND SUPPORT DIVISION

Prevention and control of disease through health promotion is a primary component of the department's mission. During 2003, the Health Promotion and Assessment Section focused its efforts on empowering county residents to make positive lifestyle choices and improve their health. The section developed a unique partnership with the University Galleries of Illinois State University to publicly display the anti-tobacco artwork of area 4th and 5th grade students. This new approach to providing health education in the form of an art exhibit was entitled Speaking Art Against Tobacco. With a grant from the McLean County Affiliate of the Susan G. Komen Breast Cancer Found-ation, the All Women, All at Risk for Breast Cancer campaign was launched. The campaign depicted the diverse population of women at risk for breast cancer and stressed the importance of mammography for early detection. The Heart Smart for Women and Teen Pregnancy Prevention programs reached target audiences with their respective prevention messages. The section distinguished itself in 2003 by receiving a Master Communicator award for the Heart Smart for Women program promotional campaign from the Association for Women in Communications and Public Relations Society of America.

Bioterrorism planning and preparedness functions grew in 2003 from the development phase to a mature status. The McLean County Terrorism Task Force, comprised of representatives of the McLean County Health Department and community first responders, focused its efforts on creating a more comprehensive multi-agency bioterrorism response plans. McLean County also became the center for a four county pre-event smallpox vaccination program. The McLean County Health Department led the way in working with area hospitals and other public health departments in Ford, Iroquois, and Livingston counties to offer smallpox vaccinations to emergency and critical care healthcare personnel. The Health Department also became the regional center of information to assist potential vaccinees in assessing their personal risk. As a result of these efforts, McLean County is better prepared to deal with the potential specter of bioterrorism.

The New Face of Public Health is about healthy people living in healthy communities. The Animal Control Program served to provide many critical health protection functions for the community in 2003. The core mission of the program is to protect the public. Policies regarding disposition of aggressive dogs during impoundment were made firm during the year. The program also enhanced its information management capacity by updating the animal vaccination and registration data processing program. The enhancement enabled wardens to retrieve animal owner information more quickly based upon tag information.

The New Face of Public Health is about connectivity and technology. An overview of The New Face of Public Health would not be complete without mentioning the new face of the department's management information system. Newer workstations have been equipped with advanced operating systems and software. Up-to-date management information systems are rapidly becoming the essential underpinning of virtually all organizations. The department's Web page now serves as a means for public contact and an emerging conduit

by which to conduct business. Several features were also added to enhance the Web page's value as a vehicle to disseminate information. On the horizon, the department expects to see more advances in Web-based technology to include real-time reporting of infectious diseases from health care providers throughout the community. Local health departments are moving swiftly to the point of becoming truly virtual organizations.

MAGES OF THE NEW FACE OF PUBLIC HEALTH IN MCLEAN COUNTY

McLean County Health Department was designated a regional vaccination site for administering the smallpox vaccine to first responders. A nurse prepares for a smallpox clinic *(pictured above)*.

Regulated Work Area

As a new feature of the West Nile Virus surveillance efforts in McLean County, mosquitoes were collected weekly and tested for the presence of the virus. A student intern conducts a test in the lab. (pictured above)

The McLean County Health Department IPLAN Task Force focused on reducing Infant Mortality lead a number of public awareness efforts in 2003. Director Bob Keller addresses an audience about infant mortality (pictured right).

Right: During the summer of 2003, an explosion caused major damage to the McLean County Law & Justice Center. For several weeks, the Health Department Building served as the temporary center for McLean County government.

Lori Ann Cook The Pantagrap

A quilt was made to display the truth about tobacco and its impact on McLean County residents (pictured below).

A community forum was held to discuss and improve sexuality education for teens in McLean County schools (pictured above).

RECOGNITIONS ALICE J. OLSSON MEMORIAL EMPLOYEE OF THE YEAR AWARD

The Alice J. Olsson Memorial Employee of the Year award honors an employee of the McLean County Health Department for outstanding achievement related to public health services in McLean County.

KIM DOWD, 2003 EMPLOYEE OF THE YEAR

Kim Dowd was honored as the McLean County Health Department 2003 Alice J. Olsson Memorial Employee of the Year. Ms. Dowd is the WIC (Women, Infants, & Children) program coordinator and has been with the McLean County Health Department for 11 years. Ms. Dowd received the award for her efforts to improve the WIC program and keep such a large, high-intensity program operating smoothly in order to adequately serve thousands of McLean County women, infants and children. The WIC program provides nutrition education, access to health care and supplemental food packages to income eligible pregnant women, infants, and young children. The program serves nearly 4,000 county residents annually. As a result of Ms. Dowd's leadership, the WIC program received many accolades and achieved excellence in the areas of childhood immunizations, compliance with state requirements, integration of maternal and child health services, and exceeding caseload projections. Ms. Dowd was noted by her coworkers as someone who works tirelessly and in a dedicated fashion to better the lives of McLean County Health Department clients and employees.

RECOGNITIONS PUBLIC HEALTH AWARD

Each year, the McLean County Health Department sponsors the McLean County Board of Health Public Health Award. The award honors a McLean County resident who has furthered public health principles and practices and provided valuable service to county residents. The nominee's public health contribution can be either professional or occupational as a volunteer or in a paid capacity.

ERNE LAMBERT, 2003 PUBLIC HEALTH AWARD WINNER

Ernie Lambert was named a recipient of the McLean County Board of Health's 2003 Public Health Award for promoting public health as a volunteer for the American Red Cross, Scott Health Resources Center, YWCA Senior Services Program, McLean County Cardiovascular IPLAN task force and local division of the American Association for Retired Persons. His energy and devotion of countless hours of service enabled McLean County residents of all ages to receive vital health services, education, and assistance during times of need.

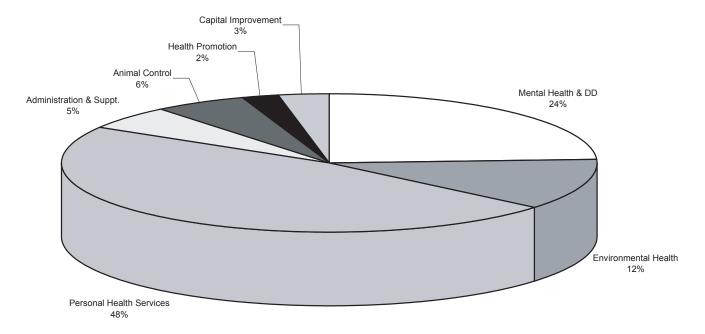

MARK LAREAU, 2003 PUBLIC HEALTH AWARD WINNER

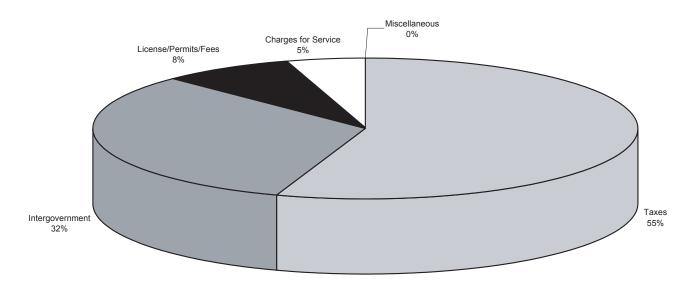

Mark Lareau, operations coordinator for BroMenn Regional Medical Center emergency department, was also named a recipient of the McLean County Board of Health's 2003 Public Health Award. Mr. Lareau was honored for his efforts in preparing McLean County to respond in the event of a bioterrorist attack. By contributing time and leadership, he spearheaded the formation and mission of the McLean County Community Response to Bioterrorism task force, as well as the overall response plan for BroMenn Regional Medical Center. Mr. Lareau coordinated a complex network of emergency responders, hospital administrators, firefighters, public and private health agencies, law enforcement officers and businesses to combine their efforts and create a solid response plan. His dedication to public health and safety has created a blanket of protection for McLean County residents.

Morris, Jan Weber

Work began in the summer to replace the exterior of the Health Department Building. A new face was given to public health in McLean County.

"...an effective public health system is a basic ingredient in a country's economic prosperity. It is dangerous to forget the strength that our public health system provides our country."

Bernard J. Turnock, MD, MPH
Professor and Director of the Division of
Community Health Sciences, School of Public Health,
University of Illinois at Chicago
From his book titled *Public Health: What it is and How it Works*
